## RETROGRADE MOTION

As the earth spins, the signs along the zodiac belt and the planets appear to move east to west hour by hour. But over time, the planets move through the signs west to east. The Moon takes two to three days to traverse a sign while Neptune and Pluto take over a decade! Each planet (other than the Sun or Moon) appears to stop and reverse its direction from time to time. This is an optical illusion called "**Retrograde**" motion. Later, it stops a second time and resumes forward (Direct) motion. It hangs out longer at the degrees of these stopping points, called "stations." When that planet, or even another planet, later makes connections ("aspects") to the station degrees, issues that emerged during that Retrograde period are re-visited. Matters associated with the planet are more difficult during a Retrograde and more intense at stations.

Planets move through the Retrograde range three times. First they proceed forward through the range of degrees where the backtracking will occur. This is called the entry "shadow" (shaded on the graph). Next, they back up over that degree range in the Retrograde portion of the cycle (marked in black on the graph). Finally, they go forward again through the backtracking range in the exit "shadow" (shaded). Related events can occur during these three phases. We don't feel the effect of the shadows as much as we do the Retrograde, but may sense a slow-down at stations.

Many people keep an eye out for **Mercury Retrograde** since it's linked to mix-ups in all forms of communication and local transportation. Anything begun then (or in the entry shadow) is subject to mistakes or revisions. A safer time for contracts, major decisions or beginning new activities is when Mercury is not in the entry shadow or Retrograde. There's less likelihood for revision later for activities initiated during the exit shadow.

Times of "least resistance" are when the fewest heavenly bodies travel backward. The higher the number retrograde, the more progress is impeded. The year begins with two times of no retrogrades: 1/11 - 2/15 and 3/10 - 4/24. There's only one retrograde 2/16 - 3/9 and 4/25 - 5/10, thus, one or none for four months! Later on, seven or more are in reverse 7/20 - 10/4: nine (very rare) for only three days 9/9 - 9/11, surrounded by two periods of eight 8/15 - 9/8 and 9/12 - 9/29. Seven are Retrograde 7/11, 7/20 - 8/14, 9/30 - 10/4 and 10/13 - 10/17. The remainder of 2020, two to six are Retrograde. These numbers include Eris, although it's not shown on the chart.

Planetary stations are hard enough on their own and even more challenging when they occur nearly simultaneously. In 2020, there are two stations on 1/10, the day of a Lunar Eclipse! Twice there are a couple stations within two to three days: 6/23 - 6/25 and 7/11 - 7/12, and once when three pivot within four days: 5/11 - 5/14. There are also stations at New or Full Moons on 3/9, 7/20 and 12/14 - 12/15. It's best to avoid major decisions and actions around these times.

See if any station degree makes a strong connection to your chart (within 2° of being exact). In that case, the entire Retrograde cycle, including shadows, presents challenges for the part of your life related to the affected item(s) in your chart. The impact is most noticeable for a few days surrounding the stations. The retrograde planet stimulates the matters of the house where the contacted natal planet is positioned and any house where the natal planet rules the sign on the cusp.

## MOON GROOVES

New and Full Moon degrees repeat for about 6 months, shifting through consecutive signs. (I coined the term "moon groove" for this phenomenon.) For the next 6 months or so, the degree of each New and Full Moon decreases 1-2° per month until another groove ensues. This pattern spans two calendar years, only partially visible on the 2020 list. Such an emphasis extends the usual influence of New and Full Moons.

New Moons occur within one degree of 4° of the signs from October 2019 through March 2020. Full Moons during the same time frame are within one degree of 19°. In the next groove, from October 2020 through March 2021, New Moons occur within one degree of 23° of the signs and Full Moons are within one degree of 8°.

If you have a planet in your birth chart at a moon groove degree, it receives extra attention during a groove period. If it's accentuated by New Moons, do something new in the area of your life represented by that planet. If Full Moons spotlight your natal planet, matters culminate in a big way over several months regarding the affairs of that planet. In interpreting effects, consider your birth planet's sign, house and aspects. If a New or Full Moon falls on your birthday, that's important, even more so if it's within the period of a moon groove.

For keywords describing planets, signs and aspects, see my handy "[Astrologer's Apprentice Cheat Sheet](#)."

● New Moon ○ Full Moon ⊕ Eclipse Ⓡ Retrograde Ⓚ Direct Ⓛ Shadow ends © 2018 Janet Booth | 1-877-293-1607 | AstrologyBooth.com

The shadows of Chiron, Neptune and Pluto overlap, creating brief double shadows (darker shading). Eris has overlapping shadows, as well. Eris begins 2020 Retrograde, turning Direct 1/10 at 23°13' AR. It has overlapping shadows from 3/2 to 5/29 between 23°27' AR and 24°20' AR, turning Retrograde 7/20 at 24°33' AR. It next turns Direct 1/10/21 at 23°27' AR.
